

iKe Fact Sheet:

# Project Management Support

iKe includes project management support for the development process and management overview.

iKe is a hosted content creation and production environment that sets a new standard in project management support.

iKe is the first application to integrate Project Management tools with an ISD methodology supported with online content creation tools and embedded performance support for the ISD team.

The Project Management tools allow project managers to:

- Create a Project Management Plan for a courseware development project
- Create a Gantt Chart depicting milestones and tasks in the development project
- Select from more than 40 milestones that describe deliverables or key events in the life of a courseware development project
- Select from more than 100 instructional systems development tasks and assign resources
- Monitor task and milestone status
- Generate reports on project status
- Generate reports on resource usage
- Store project related documents in the online development environment so they are available to all project stakeholders

iKe's Project Management tools enable project managers to create, modify, monitor, and close projects while allowing all project stakeholders access to up-to-date project status information.

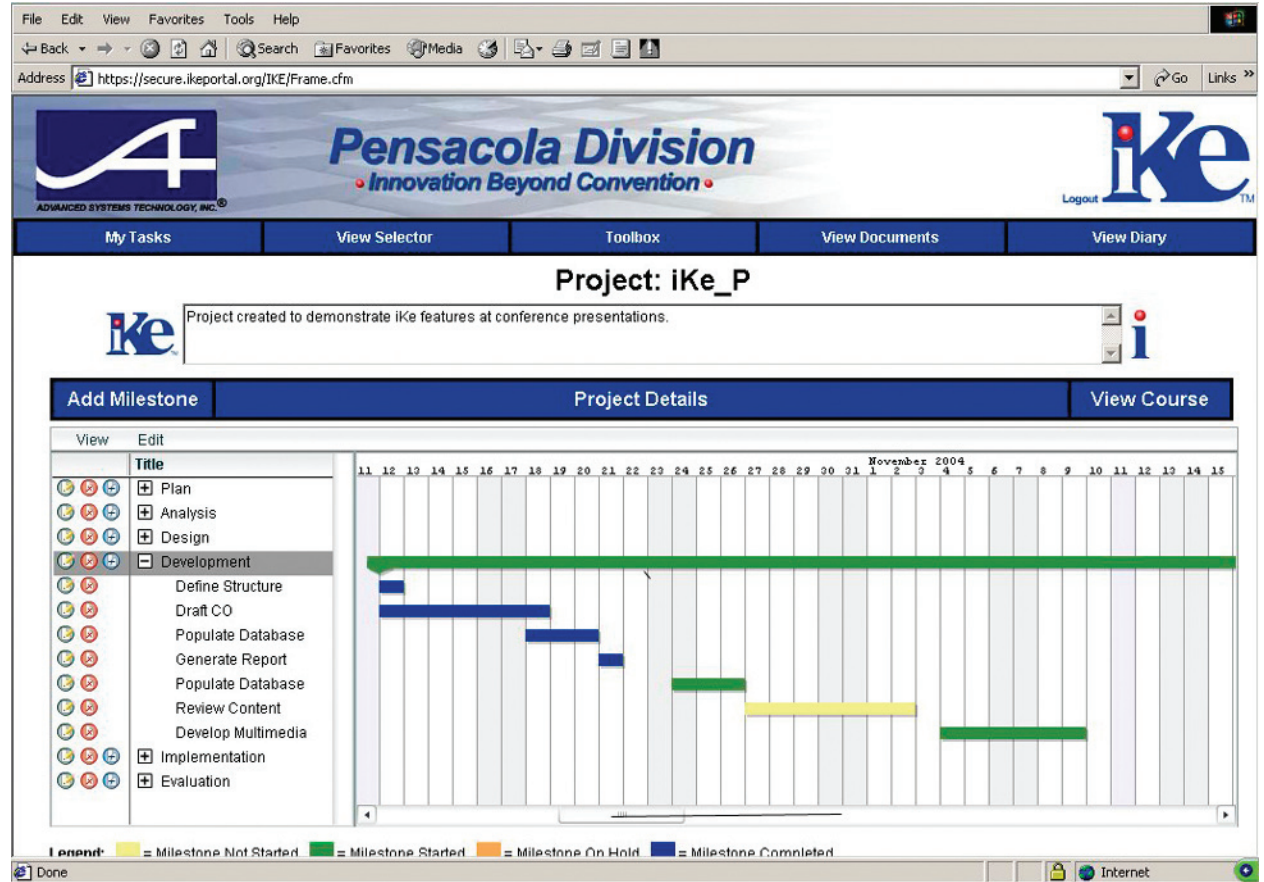

Fig. 1: iKe allows courseware developers to choose which SCORM specification courseware should adhere to.
